

Aviation English Test 24

Types of Aircraft

1- Which type of aircraft is used for transporting large amount of passengers over long distances?

- (a) Helicopter
- (b) Airliner
- (c) Business jet
- (d) Cargo aircraft

2-What is a narrow-body airliner?

- (a) An airliner with a single aisle between the seats
- (b) An airliner with two aisles between the seats
- (c) An airliner with a large cargo capacity
- (d) An airliner that is designed for short-haul flights

3-What is a wide-body airliner?

- (a) An airliner with a single aisle between the seats
- (b) An airliner with two aisles between the seats
- (c) An airliner with a large cargo capacity
- (d) An airliner that is designed for long-haul flights

4-What is a business jet?

- (a) A small, privately owned jet that is used for business travel
- (b) A large, commercial jet that is used for transporting passengers
- (c) A helicopter that is used for transporting people or goods
- (d) A type of airplane that is designed for agricultural use

5-What is a cargo aircraft?

- (a) An aircraft that is designed to transport cargo
- (b) An aircraft that is designed to transport passengers
- (c) An aircraft that is used for military purposes
- (d) An aircraft that is used for agricultural use

6-What is a general aviation aircraft?

- (a) An aircraft that is used for commercial purposes
- (b) An aircraft that is used for private or personal use
- (c) An aircraft that is used for military purposes
- (d) An aircraft that is used for agricultural use

7-What is a seaplane?

- (a) An aircraft that is used for agricultural use
- (b) An aircraft that can land on and take off from land
- (c) An aircraft that is used for military purposes
- (d) An aircraft that can land on and take off from water

8-What is a helicopter?

- (a) An aircraft that has rotor on top that rotates to lift and propel the aircraft
- (b) An aircraft that has two or more rotors that rotate to lift and propel the aircraft
- (c) An aircraft that has fixed wings and a propeller or jet engine
- (d) An aircraft that is used for military purposes

9-What is a glider?

- (a) An aircraft that has a single rotor that rotates to lift and propel the aircraft
- (b) An aircraft that has fixed wings and a propeller or jet engine
- (c) An aircraft that has fixed wings and no engine
- (d) An aircraft that is used for military purposes

10-What is a hot air balloon?

- (a) An aircraft that has fixed wings and a propeller or jet engine
- (b) An aircraft that is lifted by helium or hydrogen
- (c) An aircraft that is lifted by hot air
- (d) An aircraft that is used for military purposes

11-What is an aerobatic aircraft?

- (a) An aircraft that is designed to perform maneuvers that are outside of the normal range of flight
- (b) An aircraft that is used for commercial purposes
- (c) An aircraft that is used for private or personal use
- (d) An aircraft that is used for military purposes

12-What is a loop?

- (a) A maneuver in which the aircraft rolls 360 degrees around its longitudinal axis
- (b) A maneuver in which the aircraft rolls 180 degrees around its longitudinal axis
- (c) A maneuver in which the aircraft pulls up into a vertical climb
- (d) A maneuver in which the aircraft dives down to a steep angle

13-What is a tiltrotor aircraft?

- (a) An aircraft that is used for commercial purposes
- (b) An aircraft that is designed to perform maneuvers that are outside of the normal range of flight
- (c) An aircraft that combines the vertical takeoff and landing (VTOL) capabilities of a helicopter with the speed and range of a fixed-wing aircraft
- (d) An aircraft that is used for military purposes

Answers:

1. B
2. A
3. B
4. A
5. A
6. B
7. D
8. A
9. C
10. C
11. A
12. A
13. C
